About the Emergency Management Workshop

Emergency Management in the pipeline industry has received a large amount of attention over the last couple of years. Questions are being asked by emergency responders and the general public - "Are you ready for a pipeline emergency should you have one? Is your emergency plan effective and has been tested for an emergency in my back yard?"

This workshop is conducted annually and combines training and education for managing both natural disasters and third party damage emergencies. This workshop is beneficial for key personnel involved in emergency planning and response, field operations management, public awareness professionals, corporate communications experts that deal with media outlets on a day to day basis, and technical support personnel that work with regulatory agencies during a time of a pipeline incident.
